About

Full Stack Engineer with enterprise experience architecting and delivering software solutions across the space industry and healthcare insurance sector. Practiced in fast-paced lifecycle teams, translating client needs and feedback into features by utilizing AI coding tools as well as manual coding. Meticulous attention to visual detail along with arts training allows me to double as an embedded UX/UI designer creating intuitive interfaces to improve usability and user experience.

Experience

Alma - Full Stack Engineer 2 — 8 Months, 2022

Skills: React.js, Typescript, Django, Python, Datadog, Launch Darkly, SQL, Claude

- Worked on a high cadence lifecycle team, responsible for top of funnel conversions and quick feature iterations for multiple projects and ongoing experiments.
- Led conversion of a multi filter search page from. jsx to .tsx which improved type safety, reduced edge cases, and improved testability for a core product service.
- Co-led a full stack auto matching feature which had a relative ~5.9% lift in client conversions to appointment.
- Improved company-wide devex by adding django migrations to our dev docker compose, automating an otherwise opaque manual task during development after rebasing new migrations.

Las Cumbres Observatory - Full Stack Engineer — 2023 - 2026

Skills: Vue3, Javascript, Django, Python, NixOS, Redis, RabbitMQ, PostgresSQL

- Architected and built Datalab, a web-based platform using Vue3 and Django, enabling users to execute scientific pipelines and process astronomical data.
- Optimized webworker to do image scaling and multiple color channel stacking in real-time in the browser.
- Acted as a sole product owner, directly engaging with users to translate feedback into agile feature development and automated deployment with a CI/CD pipeline.

Avanade - Full Stack Engineer — 2022 - 2023

Skills: Java Spring, .Net Core, React, Typescript, Angular, JavaScript, Java, C#, Node.js, SQL

- Developed proof of concept car insurance mobile app with Angular, .NET API, and SQL in 3 weeks for clients.
- Presented React/Java Spring application to a monthly training meeting for fellow consultants who were looking to learn React Spring web app development.
- In collaboration with the team, implemented mobile number account recovery, increasing a client's recovery logins by 40%.

Ciena - Junior Embedded Network Engineer — 7 Months, 2022

Amazon/Tech Core - Software Engineer Intern — 8 Months, 2020

Projects

Datalab - ***Vue3, Django*** https://github.com/LCOGT/ptr_datalab

Browser tool for science operations on Astronomy FITs files ensuring research grade accuracy for compute restricted users

Airport Weather Tool - ***React, .Net*** https://github.com/LTDakin/AirportWeatherTool

Proof of concept that fetches weather & airport runway api, to recommend best takeoff and landing strip for headwinds for any airport in the United States

Team-Do - ***React, Typescript, Nest JS, Zod, Jotai*** https://github.com/LTDakin/To-Do-Teams

Personal social media project that allows for personalized accounts to create Todos that you can share with other users. Experiment to try out modern JS frameworks and state/type libraries.
