About

Mid-level Software Engineer with enterprise experience architecting and delivering software solutions. Practiced in translating client communication and feedback into features with high velocity by utilizing AI coding tools paired with handcrafted algorithms. Meticulous attention to visual detail along with arts training ensures superior UX/UI design to create intuitive and pleasing interfaces that maximize user adoption and efficiency.

Experience

Alma - Software Engineer 2

2026 - Current

Environment: React.js, Django, Python, Datadog, Launch Darkly, SQL, Claude

- Worked on high cadence provider facing client-activation team, responsible for top of funnel conversions and quick feature iterations for multiple projects and ongoing experiments
- Led conversion of a multi filter search page from .jsx to .tsx improving type safety, reducing edge cases, and improving testability for a core product service improving search stability for users reducing rollbar errors.
- Improved devex by running django migrations in our dev and deployment containers, automating an otherwise manual task during development.
- Comfortable using agentic coding methods to increase lead times, for features finished on or ahead of time with few to no blocking bugs during QA.
- Co-led a full stack auto matching feature which had a relative ~5.9% lift in client conversions to appointment.

Las Cumbres Observatory - Full Stack Engineer

2023 - 2026

Environment: Vue3, Javascript, Django, Python, NixOS, Redis, RabbitMQ, PostgreSQL

- Architected and built Datalab, a web-based platform using Vue3 and Django, enabling users to execute scientific pipelines and process astronomical data.
- Optimized webworker to do image scaling and multiple color channel stacking in real-time in the browser.
- Acted as a sole product owner, directly engaging with users to translate feedback into agile feature development and automated deployment with a CI/CD pipeline.

Avanade - Full Stack Engineer

2022 - 2023

Environment: Java Spring, .Net Core, React, Angular, JavaScript, Java, C#, Node.js, SQL

- Developed proof of concept car insurance mobile app with Angular, .NET API, and SQL in 3 weeks for clients.
- Presented React/Java Spring application to a monthly training meeting for fellow consultants who were looking to learn React Spring web app development.
- In collaboration with the team, implemented mobile number account recovery, increasing a client's recovery logins by 40%.

Ciena - Junior Embedded Network Engineer

7 Months, 2022

Amazon/Tech Core - Software Engineer Intern

8 Months, 2020

Projects

Datalab - Vue3, Django

https://github.com/LCOGT/ptr_datalab

Browser tool for science operations on Astronomy FITs files ensuring research grade accuracy for compute restricted users

Airport Weather Tool - React, .Net

<https://github.com/LTDakin/AirportWeatherTool>

Proof of concept that fetches weather & airport runway api, to recommend best takeoff and landing strip for headwinds for any airport in the United States

Team-Do - React, Nest JS, Typescript, Zod, Jotai

<https://github.com/LTDakin/To-Do-Teams>

Personal social media project that allows for personalized accounts to create Todos that you can share with other users.
Experiment to try out modern JS frameworks and state/type libraries.
